

An under-the-hood look to the

Online schema change

Some slides + master-class + future

Nikita Malyavin
MariaDB Corporation

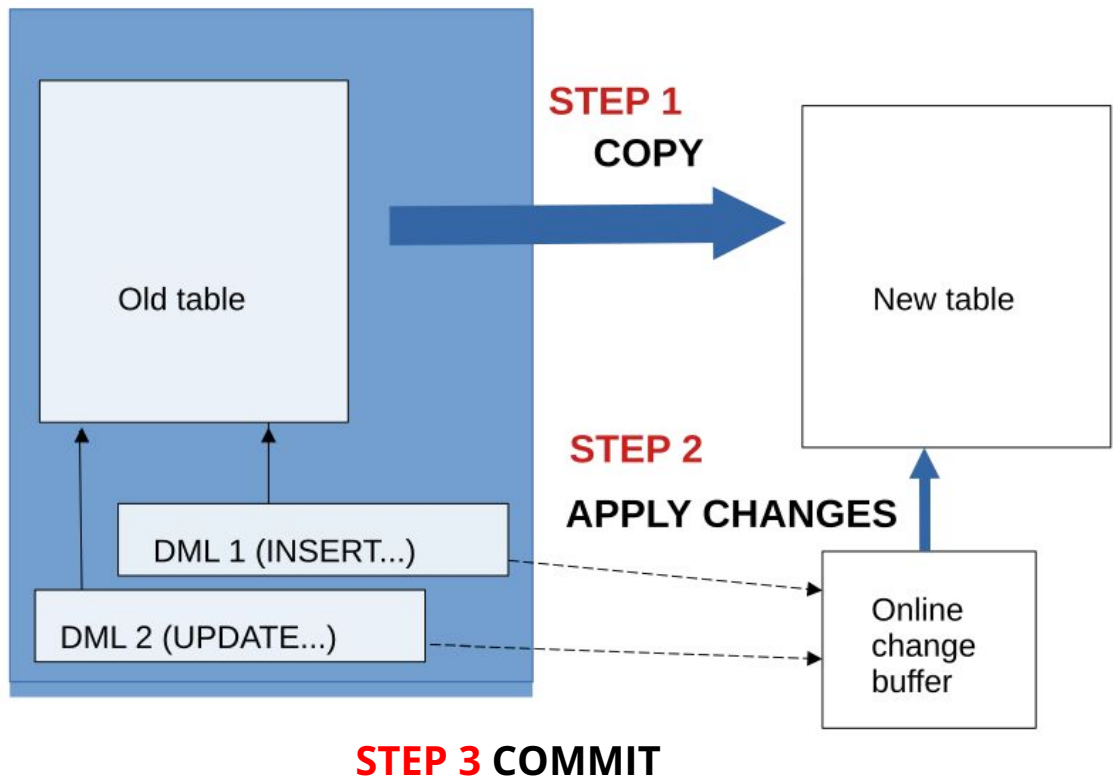

whoami

- Senior software engineer @ MariaDB plc
- Developing MariaDB Server from **2018**

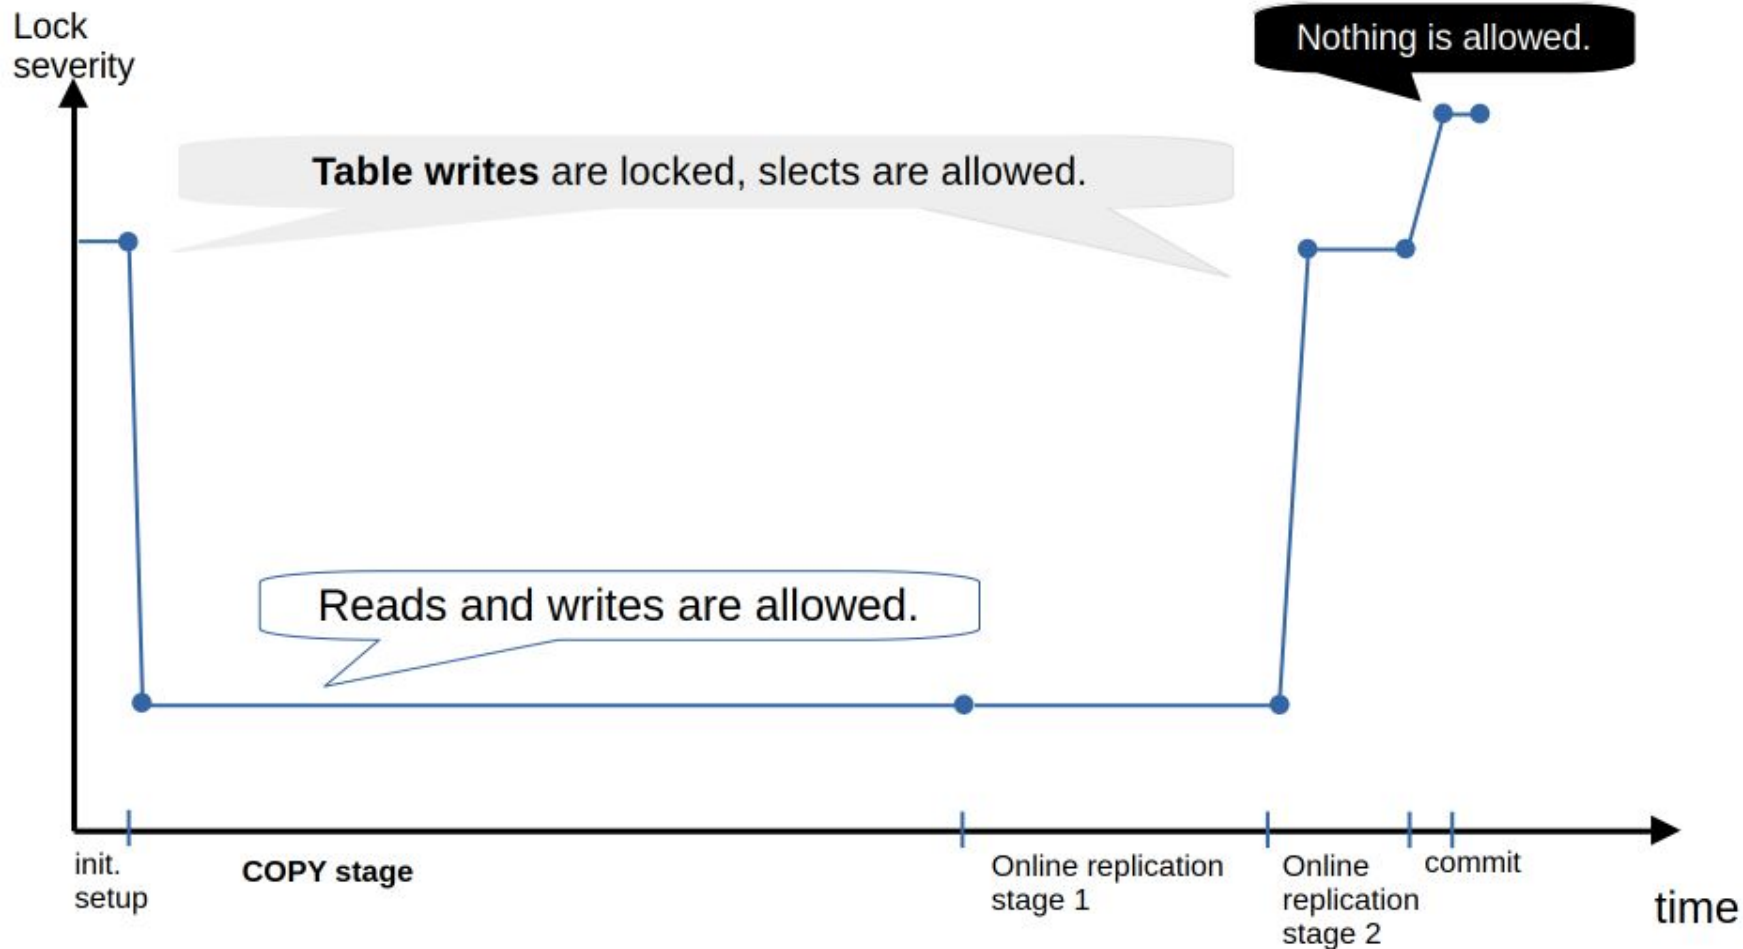

- Application-time periods
- System versioning w/Alexey Midenok
- Virtual columns
- ➔ Online ALTER TABLE

Mechanism

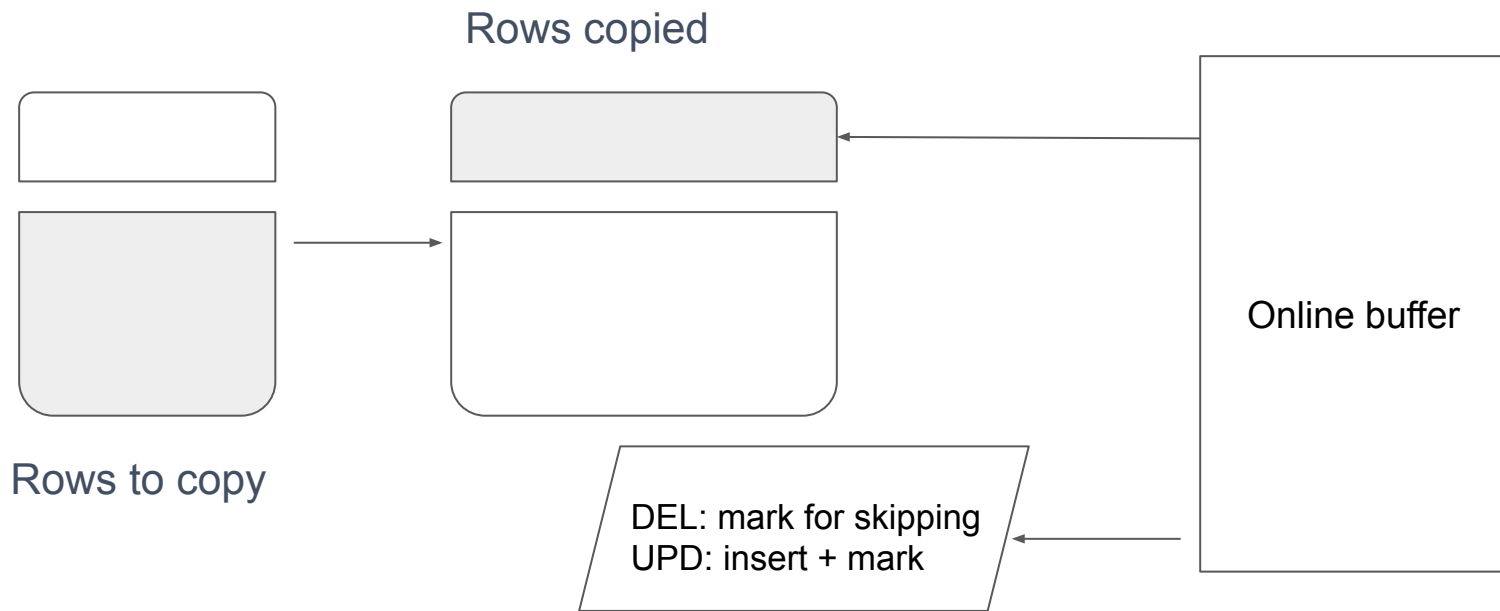

- Only the **old** table is visible until **STEP 3**
- DMLs are replicated to *Online change buffer*
- **old** and **new** tables are atomically swapped during **STEP 3**

Optimization: eliminate at-commit bottleneck

Optimization 2: don't wait for the copy end

Optimization 3: non-blocking commit

- Hard!
- But possible
- We should catch a good moment for enabling a new table
- The transactions will have to wait until the changes are applied to the new table
